ANSWER 1 OF 9 CAPLUS COPYRIGHT 2004 ACS on STN  
Structure-activity relationship (SAR) studies of initial screening hits from our corporate library of compds. and a structurally related series of CCR1 receptor antagonists were used to determine that an N-(alkyl)benzylpiperidine is an essential pharmacophore for selective CCR3 antagonists. Further SAR studies that introduced N-(ureidoalkyl) substituents improved the binding potency of these compds. from the micromolar to the low nanomolar range. This new series of compds. also displays highly potent, in vitro functional CCR3-mediated antagonism of eotaxin-induced Ca<sup>2+</sup> mobilization and chemotaxis of human eosinophils.

AB Compsds. of general formula [I; wherein Ar1 and Ar2 are each an optionally substituted aromatic group; P and Q are each a divalent aliphatic hydrocarbon group which may contain ethereal oxygen or sulfur in the carbon chain and may be substituted; R1 and R3 are each (i) hydrogen, (ii) acyl, or (iii) optionally substituted hydrocarbonyl; R2 and R4 are each (i) hydrogen, (ii) optionally substituted alkyl, or (iii) optionally substituted alkylcarbonyl; alternatively R1 and R2 or R3 and R4 together with the nitrogen atom adjacent thereto may form a monocyclic or fused nitrogenous heterocyclic group; and j is 0 or 1], salts of the same, or prodrugs thereof are prepared. These compds. are useful for the treatment of diseases caused by MCH, e.g. obesity (as antiobesity agents) or overeating (as appetite depressants), or for the improvement of emotional disorders or sexual function. Thus, benzyl 2-[(5-hydroxy-2,2-diphenylpentyl)amino]-2-oxoethylcarbamate was brominated by Br and Ph<sub>3</sub>P in MeCN at room temperature for 1 h to give benzyl 2-[(5-bromo-2,2-diphenylpentyl)amino]-2-oxoethylcarbamate which was dissolved in MeCN, treated with 4-phenylpiperidine and K<sub>2</sub>CO<sub>3</sub> in MeCN, and stirred at 40° overnight to give, after purification on alumina column chromatog. and conversion into the HCl, benzyl 2-[[2,2-diphenyl-5-(4-phenylpiperidino)pentyl]amino]-2-oxoethylcarbamate hydrochloride (II). II in vitro inhibited the binding of [35S]-guanosine 5'-(γ-thio)triphosphate to human somatostatin-like receptor (SLC-1) with IC<sub>50</sub> of 5 nM. Tablet formulations containing II were described. .

AB Ligands for the CCR1 receptor (MIP-1 $\alpha$  and RANTES) have been implicated in a number of chronic inflammatory diseases, most notably multiple sclerosis and rheumatoid arthritis. Because these ligands share a common receptor, CCR1, we sought to discover antagonists for this receptor as an approach to treating these disorders. A novel series of 4-hydroxypiperidines has been discovered by high throughput screening (HTS) which potently inhibits the binding of MIP-1 $\alpha$  and RANTES to the recombinant human CCR1 chemokine receptor. The structure-activity relationships of various segments of this template are described as the initial HTS lead was optimized synthetically to the highly potent receptor antagonist I. This compound has been shown to have at least 200-fold selectivity for inhibition of CCR1 over other human 7-TM receptors, including other chemokine receptors. In addition, data obtained from in vitro functional assays demonstrate the functional antagonism of compound I and structurally related analogs against the CCR1 receptor in a concentration dependent manner. The discovery and optimization of potent and selective CCR1 receptor antagonists represented by compound I potentially represent a novel approach to the treatment of chronic inflammatory diseases.

L6 ANSWER 5 OF 9 CAPLUS COPYRIGHT 2004 ACS on STN  
 AB The CC chemokines macrophage inflammatory protein-1 $\alpha$  (MIP-1 $\alpha$ ) and RANTES (regulated on activation normal T cell expressed) have been implicated in rheumatoid arthritis and multiple sclerosis. Since their effects are mediated through the CCR1 chemokine receptor, we set up a small mol. CCR1 antagonist program to search for inhibitors. Through high capacity screening we discovered a number of 4-hydroxypiperidine compds. with CCR1 antagonist activity and report their synthesis and in vitro pharmacol. here. Scatchard anal. of the competition binding data revealed that the compds. had  $K_i$  values ranging from 40 to 4000 nM. The pharmacol. profile of the most potent member of this series, (2,2-diphenyl-5-(4-chlorophenyl)piperidinyl)valeronitrite (I), was further evaluated. Compound I showed concentration-dependent inhibition of MIP-1 $\alpha$ -induced extracellular acidification and  $Ca^{2+}$  mobilization demonstrating functional antagonism. When given alone, the compound did not elicit any responses, indicating the absence of intrinsic agonist activity. Compound I inhibited MIP-1 $\alpha$ - and RANTES-induced migration in peripheral blood mononuclear cells in a dose-responsive manner. Selectivity testing against a panel of seven transmembrane domain receptors indicated that compound I is inactive on a number of receptors at concns. up to 10  $\mu$ M. This is the first description of CCR1 receptor antagonists that may be useful in the treatment of chronic inflammatory diseases involving MIP-1 $\alpha$ , RANTES, and CCR1.

AB Compds. which are MIP-1 $\alpha$ /RANTES-receptor antagonists are disclosed, specifically I [Ar1, Ar2 = (un)substituted aromatic group; Q1, Q2 = (un)substituted divalent C1-6 aliphatic hydrocarbon group which may have either O or S within the C chain; R1 = H, (un)substituted alkyl or (un)substituted alkylcarbonyl; R2 = (un)substituted hydrocarbon group or (un)substituted acyl; or NR1R2 = (un)substituted N-containing heterocyclic; NZ = (un)substituted N-containing mono- or fused heterocyclic group], and salts thereof. The compds. are useful for therapy or prophylaxis of inflammatory, allergic, and other diseases. Over 120 title compds., and a variety of intermediates, were prepared. For instance, N-alkylation of 4-(4-chlorophenyl)-4-hydroxypiperidine by 5-(formylamino)-1-iodo-4,4-diphenylpentane in MeCN in the presence of K2CO3 at 60° gave title compound II, isolated as the monohydrochloride (III). III displaced 125I-RANTES from human RANTES receptors in vitro with an IC50 of 0.04  $\mu$ M, vs. 3  $\mu$ M for ioperamide.

I

AB Title compds. (I; Ar = aromatic group; R1, R2, R3 = H, acyl, hydrocarbyl; R1R2N = heterocyclyl; m = 1-6; n = 2, 3; dotted line = optional double bond; X = O, NR3, N:), were prepared Thus, 4-(2-iodoethyl)-4-phenylisochroman and imidazole were stirred with K2CO3 in MeCN for 4 days at 60° to give 4-phenyl-4-[2-(1-imidazolyl)ethyl]isochroman, isolated as the hydrochloride. I inhibited 5-HT uptake in rat brain preps. with IC50 = 0.03-1.0 µM. I drug formulations are given.

ACCESSION NUMBER: 1995:995626 CAPLUS

DOCUMENT NUMBER: 124:145926

TITLE: Preparation of aminoalkylisochromans, -isoquinolines, and related compounds as gonadotropin-releasing hormone antagonists, calcium antagonists, and/or monoamine uptake inhibitors.

INVENTOR(S): Kato, Kaneyoshi; Sugiura, Yoshihiro; Kato, Koichi; Nagai, Yasuo

PATENT ASSIGNEE(S): Takeda Chemical Industries, Ltd., Japan

SOURCE: Eur. Pat. Appl., 104 pp.

CODEN: EPXXDW

DOCUMENT TYPE: Patent
